

AERO VOYAGER™

3-Channel R/C flying that's easy to enjoy!

With its V-tail mixing and full-function, 3-channel radio, the Aero Voyager is the next step up in a ready-to-fly electric airplane. You'll learn the subtleties of control surfaces and pushrods — good things to know for moving up to larger, more complex models in the future. And it still has the FlyZone advantage of including virtually everything needed to get started immediately, including a free DVD with helpful hints on plane setup and successful flying!

- Ready to fly, right out of the box, just add "AA" batteries for the radio.
- Designed for durability, the one-piece wing attaches quickly to the lightweight, blow-molded fuselage, and includes spars for additional support.
- A translucent canopy serves as an easy access to the battery compartment.

The Aero Voyager comes with all this: a 3-channel, single stick radio with V-tail mixing, a NiMH battery, 12V DC Quick Field Charger, 2 spare propellers — and a flight instruction DVD.

The 3-channel radio features V-tail mixing and throttle control. The throttle lever is positioned on the transmitter to allow for launching with one hand while maintaining proportional throttle control with the other.

a flight instruction DVD.

The V-tail design makes use of pushrods and control surfaces for precise flight control!

The lightweight, micro-sized servos that come with the Aero Voyager provide precise flight control.

SPECIFICATIONS

Stock Number: HCAA1981

Wingspan: 42.5 in (1080mm)

Length: 30 in (762mm)

Includes: 3-channel radio, (2) motors, speed control w/auto cutoff, NiMH battery, 12V DC field charger, (2) spare props, instructional DVD

Requires: 8 "AA" batteries
