SERVO TESTER

The size of a credit card - and not much thicker either! Simultaneously test multiple servos' performance using one of four test modes - Auto, End Point, Trim and Neutral Mode. Just connect a 4.8-6.0v receiver battery to begin. Five bright LED indicators follow the servo's test sequence

COVERING IRON THERMOMETER

Designed to give you an instant reading of your sealing iron's exact temperature. This unit is placed on the sole of the iron's shoe after the iron has had time to heat. It clearly reads the iron's temperature from 10-250 C

Eliminates up to 80% of problems like bubbles and sags caused by "guessing" at the correct temperature. A few seconds with a Pocket Thermometer will save time, money, and frustration.
