MI-01 MICRO SET

Micro Set prepares the surface with special wetting agents that cut the oils in new paint and converts the adhesive on the back of the decal to a stronger and longer lasting one. In addition, Micro Set slightly softens the decal film to make it more flexible so that it will conform better to the model's surface.

MI-02 MICRO SOL

Mirco Sol setting solution is for the most difficult irregular surfaces to be found on models. It completely softens the Microscale Decal, allowing it to drape down onto the surface of the model, conforming perfectly to surface irregularities without distortion.

MI-03 MICRO COAT FLAT

This is one tough finish, and a real breakthrough in a modern formulation of water reducible acrylic resin. For models that get a lot of handling this is the answer.

MI-04 MICRO COAT GLOSS

This is one tough finish, and a real breakthrough in a modern formulation of water reducible acrylic resin. For models that get a lot of handling this is the answer.

MI-05 MICRO COAT SATIN

This is one tough finish, and a real breakthrough in a modern formulation of water reducible acrylic resin. For models that get a lot of handling this is the answer.

MI-06 MICRO WELD

There is nothing quite like Micro Weld styrene solvent cement. You will find that application is very much different from, and easier than, other cements. It is much more forgiving than other cements are, stronger when dry, and will not craze clear plastic or tend to warp thin plastic parts like other cements can. Since it will not "lift" most paints, it can be used to repair models without repainting. No longer do parts need to be held together while applying adhesive to the seams. You will now have both hands free to position parts properly.

MI-07 MICRO MASK

Micro Mask is like masking tape in a bottle. Just apply it with a brush, let it dry, and cut it to any shape you want with a sharp-pointed knife. Peel out the part where you want to paint, leaving an outer stencil mask, and paint with the method of you prefer.

MI-08 MICRO METAL FOIL ADHESIVE

Fact is that nothing looks like real metal except real metal. And Micro Foil Adhesive is a very easy and inexpensive way to apply real metal in the form of metal foil to your models.

The most common foil is ordinary household foil.

MI-09 MICRO KRISTAL KLEAR

If there was ever a modeler's secret, this is it. Micro Kristal Klear can do so many things that can make a big difference in the appearance of your models. First, Micro Kristal Klear is a liquid that can be used to form very real looking small windows up to about 1/4 in size. It is also an adhesive for mounting clear plastic parts, windows, etc. on models.

MI-10 MICRO LIQUITAPE

Micro Liquidtape is a liquid adhesive that when applied to one side of a part and allowed to dry, can be pressed on to another clean part where it will stick firmly enough for a display model.

MI-11 MICROPREP

MicroPrep is a surface treatment applied to a difficult to bond surface (Delrin, Celcon, etc.) prior to bonding and/or painting.

MI-11 MICRO LIQUID DECAL FILM

Every modeler and decal-user should have Micro Liquid Decal Film on hand. Restore old decals by coating them with MI-12 Liquid Decal Film before wetting.
